

Accessibility Map

Seeya · an arrival, beat by beat

One arriving passenger: Hua, 72, from Shanghai, Mandarin-speaking, who asks for a wheelchair only after landing.

This PDF is the walkthrough for phones. The interactive pages ([index.html](#), [desk.html](#), [airline.html](#)) need a computer browser: Chrome, Safari or Edge.

Every person, time, request state and count is simulated. The base map is traced from Toronto Pearson's public Terminal 1 arrivals map.

Jingya Dai · University of Toronto · September 2026

1 · Which language do you use? Nine choices; the three in black are fully built, the grey ones say honestly they are not ready yet.

2 · Hello, I'm Seeya. Top card: where you are and the next stop. The drawer says what it does and two things it does not do.

4 · Four ways to get to Immigration: walk (11 min, elevators), call staff, self-service wheelchair, or sit first.

4 · Before any request: "I'll send your location and 'needs a wheelchair' to the help desk. Only those two. OK?"

5 · The request card: Staff 1, blue vest, minutes and metres counting down, sent / received / accepted / on the way, and one grey line: what the airport desk sees.

5 · The other path: nobody accepts within 3 minutes, so the request is escalated (proposed path; receiving team to be confirmed).

6 · "Show them": the card a staff member sees when Hua hands over the phone. Need, language, destination, what was tried, next step, journey code.

7 · On the move: one instruction at a time in a green banner, the dot follows the route.

8 · Before immigration: passport in hand; the assistant cannot answer for her; "I speak Mandarin" already sent to the help desk.

9 · The communication card: large print, phone can be held up or switched off.

10 · Ask about a sign: "All Passports" translated, with the source stated.

12 · Bags: carousel 14, about 25 minutes, source and time shown. Sit, eat, or buy a gift?

13 · Three places on the way back to the carousel, one with an offer. Airport picks, not reviews.

14 · The screen changed: carousel 16 now. The assistant says so, re-routes, and adds "you did nothing wrong; the information changed."

15 · Exit B: the person meeting her.

16 · How to leave the airport: someone meets me / taxi / rideshare / UP Express / bus, each with minutes and whether there are elevators.

17 · "Was there a step today where I did not help you?"

18 · A complaint points at one step on today's timeline, then a reason.

19 · Sent to the help desk with a reference; the timeline goes with it so she does not explain twice.

20 · Journey finished. The record deletes itself in 30 days, or now.

Settings: high contrast, larger text, read aloud, text only, reduce motion, vibration.

High contrast and larger text together.

Appendix · Departure sketch: boarding time, latest time to leave, and how much time is left after each suggestion.

A17 ♦	14:02	Gate F73	Wheelchair	zh	Provider A (simulated)	en route	1 min

Timer runs from "sent" on the desk clock until "accepted". "Acknowledged" does not stop it: received is not accepted. Red = past the 10-minute window with no acceptance. Window value is a placeholder; the real one is in the provider contract.

No conversation, no shopping preferences, no location trail. Each line is one event with who wrote it and on what basis.

What this desk can and cannot see. It sees requests that start on the airport's own surfaces (help points, the welcome booth, Passenger Care, this app). Requests that run inside an airline's own process do not appear until that airline or its ground handler joins. Every number here is simulated; "10 minutes", "MK888" and the counts are placeholders for the demo, not Pearson facts.

Airport coordination desk: live requests on the airport's own surfaces, a timer against a response window, one request's events.

No conversation, no shopping preferences, no location trail. Each line is one event with who wrote it and on what basis.

The desk when a provider stays silent: the row turns red and the request is escalated (proposed path).

Airline one-flight view: declared vs on-arrival demand, per-handler timing, two simulated timelines of the same day, complaint tied to an event, metric definitions left blank for a pilot.
